

CASE STUDY

Capabilities: Standard & Industrial UPS systems

Applications: IT, Data Centres, Banks, Hospitals,

Dale Power Solutions is a worldwide service provider and manufacturer of Generators & UPS.

We offer both bespoke and standard UPS systems to cover all requirements.

Industrial UPS

We design, build and test industrial UPS systems to meet any requirements. This includes both AC and DC systems as well as modular systems and batteries.

AC systems are available up to 500 kVA and DC systems available to 1250 amps.

Design—Our UPS solutions are completely customised and configured to suit all industrial environments including remote and hazardous locations.

Build—Once designed the system goes into stage-by-stage production, ensuring quality and reliability throughout.

Test—No system leaves the factory without being fully inspected and tested. We're

also happy to invite customers to view the testing themselves.

Standard UPS

A wide range of standard & efficient UPS systems are available from 1-600kVA. The (E series) range of UPS are configured and tested before leaving the factory and include battery packs and optional accessories to maximise security.

Total Asset Lifecycle Management

Our expertise built up since 1935 means not only can we provide UPS systems, but we can also maintain them for their entire lifecycle including:

- Installation & Commissioning
- Service & Maintenance
- Upgrades
- Waste management, site surveys, end user training, long term hire & spare parts
- Project Management

Your power is in safe hands
